

FOR IMMEDIATE RELEASE

**OZONE INTERNATIONAL LLC AND AMFIL TECHNOLOGIES, INC
SETTLE LAWSUIT**

Bainbridge Island, WA – September 2008 – Ozone International LLC, the leader in ozone-based cleaning & sanitizing systems for the food & beverage industries, announced today that Amfil Technologies, Inc has agreed to settle Ozone International's lawsuit alleging patent infringement.

The lawsuit, filed in US District Court in the Central District of California in November 2007, alleged that Amfil Technologies had infringed three of Ozone International's US patents which cover methods and systems for cleaning and sanitizing using a low-pressure ozone/water spray in conjunction with a high-pressure water spray.

As part of the settlement, Amfil Technologies agreed not to make, use, offer for sale, import or export any devices that directly or indirectly infringe US Patents 7087123, 7086407, and 7188632. In addition, as part of the settlement, Amfil Technologies is paying royalties to Ozone International for devices sold by Amfil Technologies prior to the settlement that used a low-pressure ozone/water spray in conjunction with a high-pressure water spray.

According to CEO Colin Chapman, Ozone International is committed to protecting the technologies used in its WhiteWater Cleaning & Sanitizing Systems. "Our intellectual property took significant ingenuity, hard work, and resources to develop, and we will vigorously defend this intellectual property as necessary. I'm pleased that both sides were open to a settlement and therefore able to minimize the time and resources spent on litigation," added Mr. Chapman.

Ozone International owns 5 US patents, numbered 7086407, 7087123, 7087124, 7188632, and 7275982. These patents and other pending patent applications relate to different aspects of a cleaning system using a stream of high pressure water and a stream of ozone/water, as well as systems for cleaning conveyor belts using a low-pressure ozone/water stream.

About Ozone International

Ozone International is the leader in ozone-based cleaning & sanitizing systems for the food & beverage industries. The company's WhiteWater Cleaning & Sanitizing Systems replace harmful sanitation chemicals and hot water with a patented combination of ozone and cold water.
