

Small package, Big impact

Bainbridge Island, WA – January 2009 – Ozone International LLC, the leading provider of in-process sanitation systems to the food industry, announced today that it has introduced the M-150 mobile WhiteWater System.

WhiteWater Systems use an environmentally-sustainable combination of ozone and cold water to continuously clean and disinfect during production, enabling processors and distributors to extend product shelf life, lower product TPC counts, run longer between major cleanups, reduce sanitation time and labor, reduce hot water use, and reduce use of traditional sanitation chemicals.

“The M-150 WhiteWater System represents a significant advance over previous-generation technologies. We’ve taken the capacity of two skid-mounted systems and fit it into a very small package – 22”W x 35”L x 34”H. Built with a stainless steel NEMA 4X enclosure, the M-150 can be used as a mobile cleaning and disinfection system on the processing floor, or can be stand mounted in an equipment room,” stated Colin Chapman, Ozone International’s CEO.

Generating up to 30 gallons per minute of ozone-infused water and up to 6 gallons per minute of high pressure water, the M-150 can by itself provide a small- or medium-size processing area with continuous disinfection of product and continuous cleaning and disinfection of product contact surfaces during production. And during off-hours sanitation, the M-150 can support up to 2 sanitation personnel, enabling them to perform sanitation without traditional chemical degreasers or sanitizers. Multiple M-150’s can be used together to support larger facilities.

“Our WhiteWater Systems have provided reliable service to the food industry’s largest processors and distributors for years, and we’ve enabled these customers to extend product shelf life, lower product TPC counts, run longer between major cleanups, reduce sanitation time and labor, reduce hot water use, and reduce use of traditional sanitation chemicals. Our customers have provided us with plenty of feedback over the years, and the M-150 is the culmination of that feedback combined with 2 years of design and testing,” added Mr. Chapman.
